### INTRODUCTION

Dorylaimid nematodes, associated with different crop plants from West Bengal, India, were comprehensively reported and described by Sukul (1967a; 1972; 1973), Sukul *et al.*, (1975), Baqri and Khera (1975, 1979), Mukherjee and Dasgupta (1981), Baqri. and Jana (1980; 1982 & 1986), Jana and Baqri (1981a & b; 1982; 1984; 1985), Dey and Baqri (1986). Nematodes of jute (Chaturvedi and Khera, 1979) and Paddy (Baqri *et al.*, 1983; Baqri and Ahmad, 2000) have been extensively observed and recorded. Recently, the nematodes associated with guava and litchi plantation in South 24-Parganas district (Sen *et al.*, 2007, 2010, 2011a, b & c; Sen, 2010) and those of banana in West Medinipur district (Gantait, *et al.*, 2009a, b & c; 2010; 2011a & b; Gantait, 2010)

have been studied. This has been observed that the nematodes from most of the districts of West Bengal (except Purulia) were reported.

Altogether 119 species under the order Dorylaimida Pearse, 1942 and 2 species under the order Triplonchida Cobb, 1920 have been listed (Table – 1), together with their references (i. e. the publication in which they were first reported or described from West Bengal). The nematodes further may be grouped in to five or six trophic levels; depending on their feeding habits, ranging from saprophytic, mycetophagous, omnivorous, plant parasitic, carnivorous, predatory etc. But such classification is out of scope in the preparation of the present list.

**Table – 1 :** List of dorylaimoid nematodes from West Bengal

Sl. No.	Group & Species	Habitat (Associated with)	Distribution	Source	Remarks
Order DORYLAIMIDA Pearse, 1942 Suborder DORYLAIMINA Pearse, 1942 Superfamily DORYLAIMOIDEA De Man, 1876 Family DORYLAIMIDAE De Man, 1876 Subfamily Dorylaiminae De Man, 1876

Distribution abbreviated as: Ban = Bankura, Bar = Bardhaman, Bir = Birbhum, Dar = Darjeeling, Hao = Haora, Hug = Hugli, Jal = Jalpaiguri, KBi = Kooch Bihar, Mal = Maldah, Med = Medinipur, Nad = Nadia, Npg = North 24-Parganas, Spg = South 24-Parganas, WDj = West Dinajpur.

New Records abbreviated as: N. R. D. = New record from the district, N. R. S. = New record from the state, N. R. C = New record from the country.

**Remark :** To arrange the above nematodes in their systematic position, the classification

proposed by Jairajpuri and Ahmad (1992) was followed. But some of the free living nematode species, described by Sukul (1967b, 1973), was not accommodated in this classification. So such species have not been listed under their systematic position and are being mentioned separately with their habitats and localities inside parentheses, which are as follows :

1. *Tobrilus vibratus* Sukul, 1967 (soil around the roots of onion, Bankura district.
2. *Nygotylus annulatus* Sukul, 1973 (soil around the roots of ornamental plants of Santiniketan, Birbhum district.

3. *Nygellus brachyuris* Sukul, 1973 (soil around the roots of Sesamum, Bankura district).
4. *Ooinchus setosus* Sukul, 1973 (soil around the roots of rose, Birbhum district).

#### SUMMARY

119 species belonging to the orders Dorylaimida Pearse, 1942 and 2 species of the order Triplonchida Cobb, 1920, described and reported from different district of West Bengal, has been listed. Most of

these are free-living (saprophytic, mycetophagous, omnivorous, carnivorous, predatory etc.) in nature and some are phytophagous. The dorylaimid nematodes associated with jute and paddy was extensively studied by different authors. The nematodes have been reported from almost all the districts except Purulia.

#### ACKNOWLEDGEMENT

The authors are grateful to the Director, Zoological Survey of India, Kolkata.
